

Mahalanobis mapping: when does Hungarian improve over Greedy?

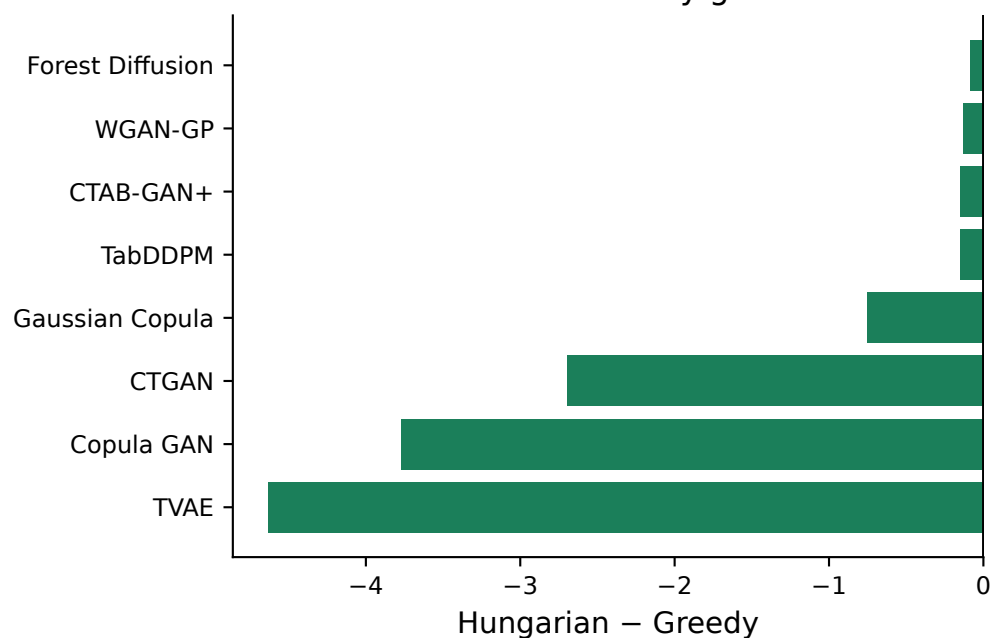

A. Overall median distance

B. Outcome direction

C. Mean difference by generator

D. Paired summary

N paired units: 106
Mean Diff (H-G): -1.354
SD Diff: 6.059
Median Diff: -0.129
% Hungarian better: 91.5%
Wilcoxon p: 3.20e-13
Rank-biserial: 0.715

Lower Mahalanobis distance = better matching.
Diff = Hungarian - Greedy; negative $\Rightarrow$ Hungarian better.
